

## LESSON 1- ASSIGNMENT

1. Fill in the gaps on the table below. Examples are given in bold.

Condition	Definition	Symptoms
<b>Example Conduct Disorder</b>	<b>There is no single definition of conduct disorders. It has an underlying thread of anything that violates societal norms or the basic rights of others.</b>	
Mental Retardation		<b>Significantly subaverage intellectual functioning, IQ below 70, difficulties in adaptive function (ie lacking the skills required of their age) in areas such as communication, self-care, interpersonal skills and so on.</b>
Stereotypic Movement Disorder		
ADHD		
Aspergers Syndrome		

2. Using notes from your set task, write a paragraph on what autism is and what symptoms would be shown in a child.

3. List five anxiety disorders in children.

4. Depression in children is becoming more common. Write brief notes on what depression is and how it can present itself in children.

5. Fill in the gaps below with the correct words.

DSM stands for the .....

It consists of three major components –

a. ....

b. ....

c. ....

For each condition, the DSM will show which symptoms must be present and for how ..... to qualify as a diagnosis.
